About Beve Straws

Beve Straws consists of a small group of passionate Aussies looking to make a difference by eliminating plastic one straw at a time.

With over 40 billion straws used annually, we endeavour to create awareness and encourage people to adopt environmentally friendly behaviours for us and future generations.

Made from rice and tapioca, Beve Straws are environmentally compatible & sustainable, gluten free, vegan and halal. Our rice straws are 100% biodegradable decomposing in approximately 100 days (or 7 days in sea water), longer lasting in beverages compared to "soggy" paper straws & 100% natural. They also have no taste, meaning they will not alter the flavour of your beverage.

So join us in the movement towards eco-friendly and 100% compostable rice straws today!
